Kirishima has been certified as a “Japan Geopark,” indicating the area's geological significance. The Kirishima Mountain Range is an active volcano cluster, as indicated by the sign on the map. The range is comprised of several volcanoes, including Mt. Koshikidake, which is the tallest peak in the region. The trail network around the mountain offers a variety of hiking opportunities, with trails that vary in difficulty and distance.

The Kirishima Mountain Range is home to a diverse range of flora and fauna, and the area is known for its rich geological features. Visitors can explore the range on foot, with trails marked for easy navigation. The map provides information on the various trails, including their lengths and difficulties, as well as the surrounding areas, such as lakes and geothermal sites.

The area is also known for its hot springs, with the Kirishima Onsen Market and other hot spring facilities providing a place to relax and enjoy the natural beauty of the region. The map includes information on how to get to these facilities, as well as other important landmarks and services, such as hospitals and tourist information centers.

In order to help reduce, or even prevent damage and injuries from any possible disasters, five sirens are installed in the vicinity of Mt. Shionomine. The sirens are used to give early warnings to residents, tourists, and accommodated facilities. Visitors are advised to be prepared and to have a plan in place in case of an emergency.

The Kirishima Mountain Range is a popular destination for hikers, and the map provides valuable information on how to plan a safe and enjoyable hike in the area. Visitors are encouraged to take necessary precautions, such as checking the weather forecast, wearing appropriate clothing, and carrying necessary supplies like water and snacks. The map also provides information on where to stay and where to eat, making it a valuable resource for anyone planning a trip to the Kirishima region.
